a socket;

a ball disposed in the socket for movement relative to the socket;

a trunnion joining the socket to permit relative pivoting movement between the ball and

socket about an axis defined by the trunnion; and

a one-way brake;

wherein the trunnion is fixed to the ball, and the one-way brake comprises:

a stepped sleeve operable to engage the trunnion;

a brake housing fixed to the socket and defining a cylindrical opening for receiving the stepped sleeve, the brake housing and the stepped sleeve cooperate to define a tapered slot having a wide end and a narrow end;
